

DAY 2

If you get stuck or feel missing refer this code file

Github Code: [Aayushpradhan88-js/Webdev](https://github.com/Aayushpradhan88-js/Webdev)

1. Images and File Paths

→ Images have two paths

a. Relative Path(Local files)

- Used when the image is inside your project folder
- The path depends on your folder structure

b. Absolute Path

- Used when the image is hosted online
- You directly use the full URL

Example:

→<https://images.pexels.com/photos/270408/pexels-photo-270408.jpeg>

Common Mistakes in absolute path

- Wrong file name
- Incorrect folder path
- Case sensitivity issues
- Image not in correct directory

2. Tables

→ Tables are used to display **structured data in rows and columns**.

- Table → starts the table
- Row → defines each row
- Heading → defines column titles
- Data → actual content inside cells

3. Linking Multiple Pages

→ Instead of one page, you connect:

- Home page
- About page
- Contact page

Key Idea

Each page is a separate file, and links connect them together.

4. Folder Structure Understanding

→ A clean project structure helps you:

- Find files easily
- Avoid confusion

Key Principle

- Organize your files from the beginning.
- Messy structure = messy development
