Layout Thinking (Core Skill)

→ Before writing CSS, always ask:

- Is this layout row or column?
- Should items be centered or spaced?
- How will it behave on different screens?

Good UI starts with thinking, not coding.

Box Model (Debugging First)

→ Every element behaves like a box:

- Content
 - Padding (inside spacing)
 - Border
 - Margin (outside spacing)
-

Display Basics

- Block → full width
 - Inline → content width
 - Flex → layout control
-

Flexbox Introduction

Flexbox helps you:

- Align elements
 - Control layout direction
 - Manage spacing
-

Key Concepts

- Main axis → layout direction
- Cross axis → opposite direction
- Alignment → positioning
- Spacing → distribution
